

1. Flucytosine [5-Fluorocytosine] is used against?  
- Yeast

2. Why Flucytosine not used alone, Monotherapy is ~~used~~ not used?

When Flucytosine is used as **Monotherapy** acquired resistance develops rapidly. So It should be given in combination with another antifungal agent.

3. What are the adverse effects of Flucytosine?

- Myelosuppression
- Gastro-intestinal upset
- Hepatitis

Flucytosine  
**Yeast**

~~not used.~~  
~~Monotherapy~~

Myelosuppression
